

Today

- Scan conversion of
 - Lines
 - Circles
 - Polygons
- Z-Buffering

5

10. Scan Conversion

Scan Conversion of Lines

- Raster graphic displays
⇒ **Generation of discrete pixel values**
- Problem: Approximation of lines by a finite number of pixels

6

10. Scan Conversion

Digital Differential Analyzer

- Gradient m given by $\frac{\Delta y}{\Delta x}$

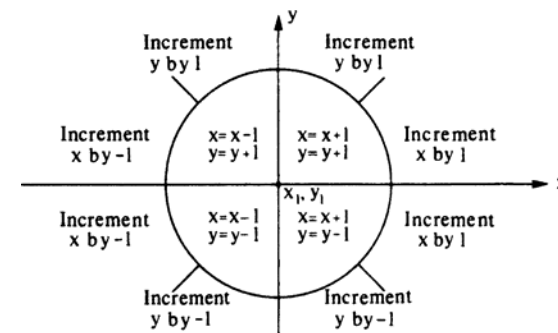

- Take pixel with nearest distance to the line

7

10. Scan Conversion

Increments in Different Octants

8

10. Scan Conversion

Disadvantages

- Costly rounding operations
- Unnecessary floating point arithmetic
- Error accumulation

9

10. Scan Conversion

Bresenham Line – Concept

- Goal: Fast decision which pixel has to be drawn next
- Criterion: position of the midpoint M with respect to the intersection point Q

10

10. Scan Conversion

Bresenham Line – Implicit Equation

- Use implicit form of the straight line

$$F(x, y) = ax + by + c = 0$$

with $a = \Delta y$, $b = -\Delta x$ and $c = \Delta x \cdot B$

since $y = \frac{\Delta y}{\Delta x}x + B \Rightarrow \Delta y \cdot x - \Delta x \cdot y + \Delta x \cdot B = 0$

- Evaluation at the midpoint M

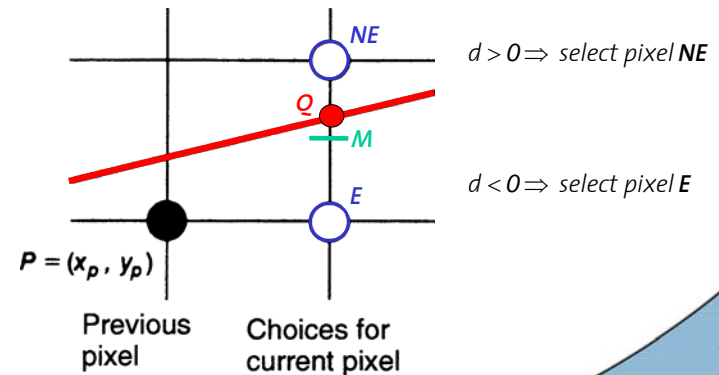

$$d = F(M) = F(x_p + 1, y_p + \frac{1}{2})$$

11

10. Scan Conversion

Bresenham Line – Pixel Decision

12

10. Scan Conversion

Bresenham Line – Update Criterion E

- Fast incremental update of the decision variable

$$d_{old} = F(x_p + 1, y_p + \frac{1}{2}) = a(x_p + 1) + b(y_p + \frac{1}{2}) + c$$

- Choosing pixel **E**, the new midpoint criterion is

$$d_{new} = F(x_p + 2, y_p + \frac{1}{2}) = a(x_p + 2) + b(y_p + \frac{1}{2}) + c$$

- The difference provides the desired increment

$$d_{new} - d_{old} = a = \Delta y$$

13

10. Scan Conversion

Bresenham Line – Update Criterion NE

- Fast incremental update of the decision variable

$$d_{old} = F(x_p + 1, y_p + \frac{1}{2}) = a(x_p + 1) + b(y_p + \frac{1}{2}) + c$$

- Choosing pixel **NE**, the new midpoint criterion is

$$d_{new} = F(x_p + 2, y_p + \frac{3}{2}) = a(x_p + 2) + b(y_p + \frac{3}{2}) + c$$

- The difference provides the desired increment

$$d_{new} - d_{old} = a + b = \Delta y - \Delta x$$

14

10. Scan Conversion

Bresenham Line – Update Criterion

15

10. Scan Conversion

Bresenham Line – Elimination of Floating Point Arithmetic

- Initialization of the decision criterion...

$$\begin{aligned} F(x_o + 1, y_o + \frac{1}{2}) &= a(x_o + 1) + b(y_o + \frac{1}{2}) + c \\ &= ax_o + by_o + c + a + b/2 \\ &= F(x_o, y_o) + a + b/2 \end{aligned}$$

$$d_{start} = a + b/2 = \Delta y - \Delta x/2$$

- ... may result in a floating point number
- Multiplication with factor 2

$$F(x, y) = 2(ax + by + c)$$

16

10. Scan Conversion

C-Code

```

void BresenhamLine(int x0, int y0, int x1, int y1) {
    int dx, dy, incE, incNE, d, x, y;
    dx = x1 - x0; dy = y1 - y0;
    d = 2*dy - dx;
    incE = 2*dy;
    incNE = 2*(dy - dx);
    x = x0; y = y0;
    WritePixel(x, y);           /* write start pixel */
    while (x < x1) {
        if (d <= 0)             /* choose E */
            d += incE;
        else {                  /* choose NE */
            d += incNE;
            y++;
        }
        x++;
        WritePixel(x, y);
    }
}

```

10. Scan Conversion

Z-Buffer – Concept

- Occlusion problem when rendering several polygons (hidden surfaces)
- Z-Buffer
 - ⇒ **Additional buffer for depth values**
 - ⇒ **Stores during scan conversion for each pixel the distance to the viewer**
 - ⇒ **Storage: Additional 16 to 32 bits per pixel**

18
10. Scan Conversion

Z-Buffer – Algorithm

- 1.) Initialize all z-values to ∞
- 2.) Scan conversion of all polygons:
 - if z-value of a polygon pixel is smaller than the current z-buffer value
 - ⇒ **replace z-buffer value by z-value of polygon**

- Complexity of algorithm: $O(N)$ with N = number of polygons
- Most important hidden surface algorithm
- Mostly implemented in hardware

19
10. Scan Conversion

Z-Buffer – Example

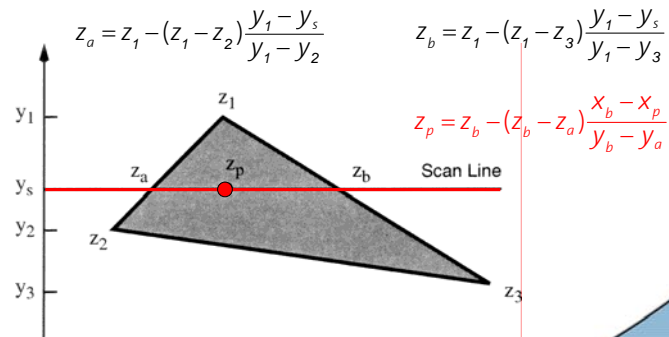

(a)

(b)

20
10. Scan Conversion

Z-Buffer – Scan Conversion of Polygons

21

10. Scan Conversion

Z-Buffer – Remarks

- Clipping at front and back-plane possible with Z-Buffer as well
- The limited depth resolution may produce aliasing effects

22
